WHY NOT EARLY WINTER FLOWERING

SWEET PEAS

We are headquarters for the finest Early Flowering Sweet Pea Seed obtainable. There are none nearly so good. We list all types in Early Flowering; the most complete list of Early Duplex-Ruffled Early Spencer, Early Butterfly, Early Cupid and are working up a complete list of the Extra Early 60-day varieties, of which Duplex Orchid is the leader. All bloom in 75 to 100 days after planting, except the Early 60-day varieties. These bloom in about 60 days after planting or about two weeks earlier than any other sweet peas on the market.

Ninety-eight percent or more of sweet pea seed grown is raised here in California. This gives you the advantage in getting seed fresh, direct from the fields here and not taking any chance of getting any old seed with poor germination count. **GET THEM DIRECT FROM US.** It takes about two and one-half days for an air letter to reach us from New York. Seed shipped the same day order is received will reach you via parcel post in about five days at New York.

Sweet peas are an especially good crop to plant on account of their long blooming period. They do not require as much heat as many other flowers, thereby a saving in fuel expense and making them a low cost crop. They yield more flowers per plant and have a wider range of colors than most other flower crops and are not difficult to raise. By this we do not mean that they need no attention after planting; but to the contrary, if well cared for they will bring greater returns than most other flowering crops. Flowering period lasts several months, yielding thousands of blossoms. If started in pots four to six weeks in advance it is very easy to re-plant directly after mums in the same beds, thereby saving time, or the seed can be planted directly in the beds after a crop is out.

For outdoor planting in California, the southern states or states where there is very little danger of freezing weather they can be planted early in the fall and in 75 to 100 days they will begin to flower and continue to bloom until summer. Covering on frosty nights is all that is necessary. A 100-foot row will give thousands of flowers with very little care except to keep down aphids and training up the vines. So why not Early Sweet Peas for indoor and outdoor planting for 1935?

By all means try our new Duplex-Ruffled as well as our Regular Spencer varieties. We especially recommend in the Duplex-Ruffled for Florists the following: Duplex-Ruffled Sonny Boy, Duplex-Ruffled Sunset, Duplex-Ruffled Baronet, Duplex-Ruffled White, Duplex-Ruffled Revelation, Duplex-Ruffled Lavender and other Duplex-Ruffled varieties in small quantities. In the regular Spencers we recommend for the florist the following: Zvolanek's Mrs. H. S. Reddick, Zvolanek's Fawn Pink, Zvolanek's Rose Flare, Zvolanek's Super-Rose, Zvolanek's Radiant No. 13, Zvolanek's Pure White, Zvolanek's Pink Beauty, Zvolanek's California Sunshine, Zvolanek's Skylark, Zvolanek's Aristocrat, Zvolanek's Monarch, Zvolanek's White Cloud, Zvolanek's Orange Supreme, Zvolanek's Embers and other colors in small quantities. You will be pleased with any of these varieties if you select from this recommendation.

Again we wish to thank you for past favors and trust that we may again be of service to you with our choice seeds, we are,

Cordially yours,

WILLIAM ZVOLANEK & CO.

William Zvolanek.

CULTURE SUGGESTIONS

Work soil at least 18 inches deep; use liberal amount of **Well decayed manure**. Cow manure is best. Use sprinkling of lime and bone; Soak seed in water for about 24 hours or until swelled up and then plant about 1½ to 2 inches deep in a well firmed soil that is good and moist, but not sticky. (DO NOT SOAK WHITE SEEDED VARIETIES).

Peas will not do well in too loose a soil. Plant one inch apart and later thin to about six inches. Do not water until seeds have begun to germinate. After germination has taken place give a good soaking. MOST FAILURES ARE CAUSED BY WATERING BEFORE SEED HAS SPROUTED. If weather is hot use some kind of shading. Protect young plants from birds outdoors. Look for Green Aphids regularly as this insect is the worst enemy. Spraying with nicotine, one part nicotine to 400 parts water with spray gun is best. There are also many other good insecticides which are excellent for the control of Aphids. Give young plants substantial supports in order that they may climb and produce good flowers. Poor flowers with crooked stems are worthless. Liquid manure feeding after they come in bloom will lengthen the flowering period and produce better flowers. Pick all flowers daily as this also lengthens the flowering period. Always keep the surface earth loose and never allow a crust to form. If grown indoors keep ventilators open to keep the air as dry as possible. A house that is kept damp and sultry will cause too much growth and the sweet peas will not bloom as soon as they should, and then will begin to bloom too high up. Early sweet peas usually bloom from 75 to 100 days after seed is planted. Leading commercial colors are in order named: Pink, Lavender, White, Salmon, Orange, Blue, Red. Other colors should be used in lesser quantities. One ounce of Sweet Pea Seed will plant about 25 feet of row.

SWEET PEA NOVELTIES FOR 1935

Sample packets of any two Novelties or any two varieties Sweet Pea seeds in our list, your choice, with order of \$5.00 or more:

ZVOLANEK'S CASCADE: (William Zvolanek) A fine new white seeded pure white. Semi-duplex, extra long stems. Same type and habit as our popular variety Mrs. H. S. Reddick. This is the finest white in existence.

ZVOLANEK'S ST. NICHOLAS: (William Zvolanek) Large brilliant Xmas Red which holds its color to the last and does well in the winter months. Extra fine for Christmas. Long stems with four flowers.

ZVOLANEK'S ROSE FAVORITE: (William Zvolanek) Excellent rose pink, extra large flowers which open up rose pink and as the flower gets older turns to a deep brilliant rose instead of fading out lighter as most pinks do. We have had this novelty in our trials for several years making observations. If left on the vine and the flowers are not picked it gives the impression that there are two distinct colors on the same vine.

ZVOLANEK'S VIOLET: (William Zvolanek) A new shade of violet in Early Sweet Peas. Very strong grower with long stems and well set flowers.

ZVOLANEK'S DUPLEX NEW ERA: (William Zvolanek) A double flashy light salmon that has real life and not a flat color. Flowers are extra large double and well set with fours. Growth is very thrifty. An excellent florist variety that will attract attention anywhere.

PRICE on each: $\frac{1}{2}$ oz. \$1.00 1 oz. \$2.00

We have had all the above varieties tried out in different parts of the U. S. under glass as well as outdoors and have received excellent reports on same.

WILLIAM ZVOLANEK'S CALIFORNIA BUTTERFLY SWEET PEA

While these sweet peas are not as large as the Spencers, they are a distinctly new type as a photo on cover shows. They grow as tall as the Spencers, but foliage is somewhat heavier. Flowers measure as much as two inches across when well grown, with stems 14 to 16 inches long. Three to four flowers on a stem as a rule. Fragrance is much more pronounced than that of the Spencers. While not the best for commercial purposes, no collection is complete without this new distinct type. Colors in Rose Pink, Black-seeded and White-seeded White, Lavender, Lilac, Navy Blue and mixed colors.
